

VINYL GRAPHICS REMOVAL

TOOLS REQUIRED:

- RAZOR BLADE

- ADHESIVE REMOVER

- HAIR DRYER / HEAT GUN

- PAPER TOWELS

- GLASS CLEANER

1. Using the hair dryer, apply heat directly to the graphics you wish to remove. The higher the temperature the easier the lettering will be to remove.
2. Peel off whatever graphics you can peel with your hands. Use the razor blade to help scrape up whatever you can not with hands. (be careful not to gouge the boat itself)
3. Once the graphics are removed, spray or apply the adhesive remover to the glue residue and let sit for a few minutes. Wipe off with paper towels. (before you apply the adhesive remover, test the adhesive remover in a small area to see if it damages the boat)
4. Once all the glue is removed, clean the area off with glass cleaner thoroughly making sure there is no adhesive or adhesive remover left behind. You are now ready to install your new graphics
